Multi-platform SaaS Suite for Pick-up and Delivery

Based on over a decade in working with clients to develop integrated mobile software and solutions running on rugged hand-held devices, Allegro Mobile has developed the cross-industry Allegro SaaS Suite for Pick-up and Delivery specifically tailored to the evolving needs of tomorrow's pick-up and delivery teams. This Software as a Service offering includes the: handheld software, cloud-based mobile platform, and back-end system integration, along with fast and responsive helpdesk support.

Allegro Pick-up and Delivery Suite

✓ **Record driver logs**

MOTOROLA

Flexible, Scalable and Secure

The Allegro SaaS Pick-up and Delivery Suite is powered by the Allegro Mobility Platform, a true mobile enterprise application platform, offering powerful security, user management, reporting and integration functions. Hosted in the Cloud and offered as a Software as a Service (SaaS) the suite includes a full set of managed application services and help-desk support, offering peace of mind to enterprise customers so that they can focus their efforts on their core business and not on worrying about their mobile applications.

Allegro Mobility Platform (Cross-device, Cross-OS - Apple iOS, Android, Windows)

Configured to meet your unique business needs

Each implementation involves a complete personalization and configuration of device-level screens to meet your unique branding, business processes and workflow requirements. This allows clients to enjoy the look and feel of custom application development with the embedded best-practices and stability of off the shelf software. In working with Allegro, our team will take you through the following business preparation process.

Map Processes → Design → Configure → Implement → Support

About Allegro

Allegro Mobile Solutions and its Allegro Mobility Platform, (Codename: Gelato) offers cross-device and cross-OS (iOS, Android and Windows) mobile SaaS suites targeted to enterprise customers within transportation, field services, retail and a variety of niche industries. With the SaaS platform, customers and authorized partners are able to modify, maintain and enhance their applications with ease.
